

Come out ahead with an iAppSys SafeSwitch migration of your cloud applications and DB workloads.
Zero initial investment, fast ROI, immediate savings.

About this graph: This graph is based on a hypothetical example where current infrastructure costs are \$15,000 per month, and a new Cloud solution is \$10,000 per month.

Don't pay twice... use SafeSwitch!

OUR METHODOLOGY, STEP BY STEP

Let's say your current monthly infrastructure costs are \$15,000 per month.

iAppSys proves to you a move to the Cloud means a lower monthly cost of only \$10,000 per month.

However, a migration may also mean you need to incur the costs of two cloud environments simultaneously - your current infrastructure costs, plus the new Cloud server.

Here's where SafeSwitch comes in. iAppSys will migrate your Apps & DB infrastructure to a Cloud solution in < 90 days, pay 100% of your Cloud solution costs the first month (i.e. \$10,000 in this example), and a minimum of 50% of your Cloud costs the second month - meaning a faster return on investment for your company, and greater savings overall for the year.

iAppSys is your guide to the Cloud

Your road to the cloud starts here.

STEP 5 (1-2 days)
Go-live scheduling
Final Migration / Cutover
Run and Maintain

STEP 4 (2-10 days)
iAppSys presents your platform build, and determines final migration dates with you.

STEP 3 (1-5 days)
iAppSys begins to build your platform architecture. Define parameters, roles, and build schedules of events.

STEP 2 (1-5 days) iAppSys creates your StopLight Report, designs your cloud architecture and assesses your potential ROI.

STEP 1 (1 day)
